

Flagstaff High School - Flagstaff Unified School District (School Year 2010 – 2011)

Flagstaff High School was awarded the S3 grant and selected the following goals and objectives as part of their action plan:

Goal 1 – *Improve conditions for learning in eligible schools by utilizing valid and reliable data*

Objective 2 – Intervention schools will experience [an improvement in their school safety score](#).

Objective 4 – Intervention schools [will experience a decrease in the percentage of students that are offered, sold or given an illegal substance on campus](#).

During the 2010/11 baseline year, this high school had a climate index of 74. To improve the climate of the school, the following universal and targeted interventions were selected:

Check In, Check Out (CICO)

CICO is a program designed to provide support and monitoring for students at-risk of developing serious or chronic behavior problems. Clearly defined expectations are developed for the student and are monitored daily, by “checking in” with a positive adult mentor at the beginning of the day and “checking out” with the mentor at the end of the day.

Class Action (CA)

CA is an alcohol-use prevention curriculum designed to delay the onset of alcohol use, reduce use among youths who have already tried alcohol, and limit the number of alcohol-related problems experienced by young drinkers.

Community Development Model (CDM)

CDM is a data driven process to identify and address the availability and type of drugs on campus by working in partnership with the larger community (i.e. small businesses, parents, law enforcement news media etc.) to develop, implement and evaluate an action plan to accurately identify and solve problems that lead to youth risk taking behavior.

Functional Behavior Assessments (FBA)

FBA is a structured, intensive, evidence-based, behavior intervention strategy, utilizing a team-based approach to address individual student problem behavior.

The National Institute on Drug Abuse (NIDA) Curriculum: Neuroscience for Students

The interactive NIDA Curriculum, *The Brain: Understanding Neurobiology Through the Study of Addiction*, provides teachers and students with current, research-based information on drug-abuse and addiction, including neurobiology, addiction, and treatment.

Positive Behavior and Interventions Supports (PBIS)

PBIS is a broad range of systematic and individualized data driven strategies for achieving important social and learning outcomes while preventing problem behavior with all students. PBIS applies a three-

tiered system of support, and a problem-solving process to enhance the capacity of schools to effectively educate all students.
